Elegance

The first impression is the one that really counts.

It's appearance and elegance will inspire

confidence with both the practice team

and their patients, ensuring a perfectly balanced

relaxed working environment.

Voyager II is a product for the 21st century setting

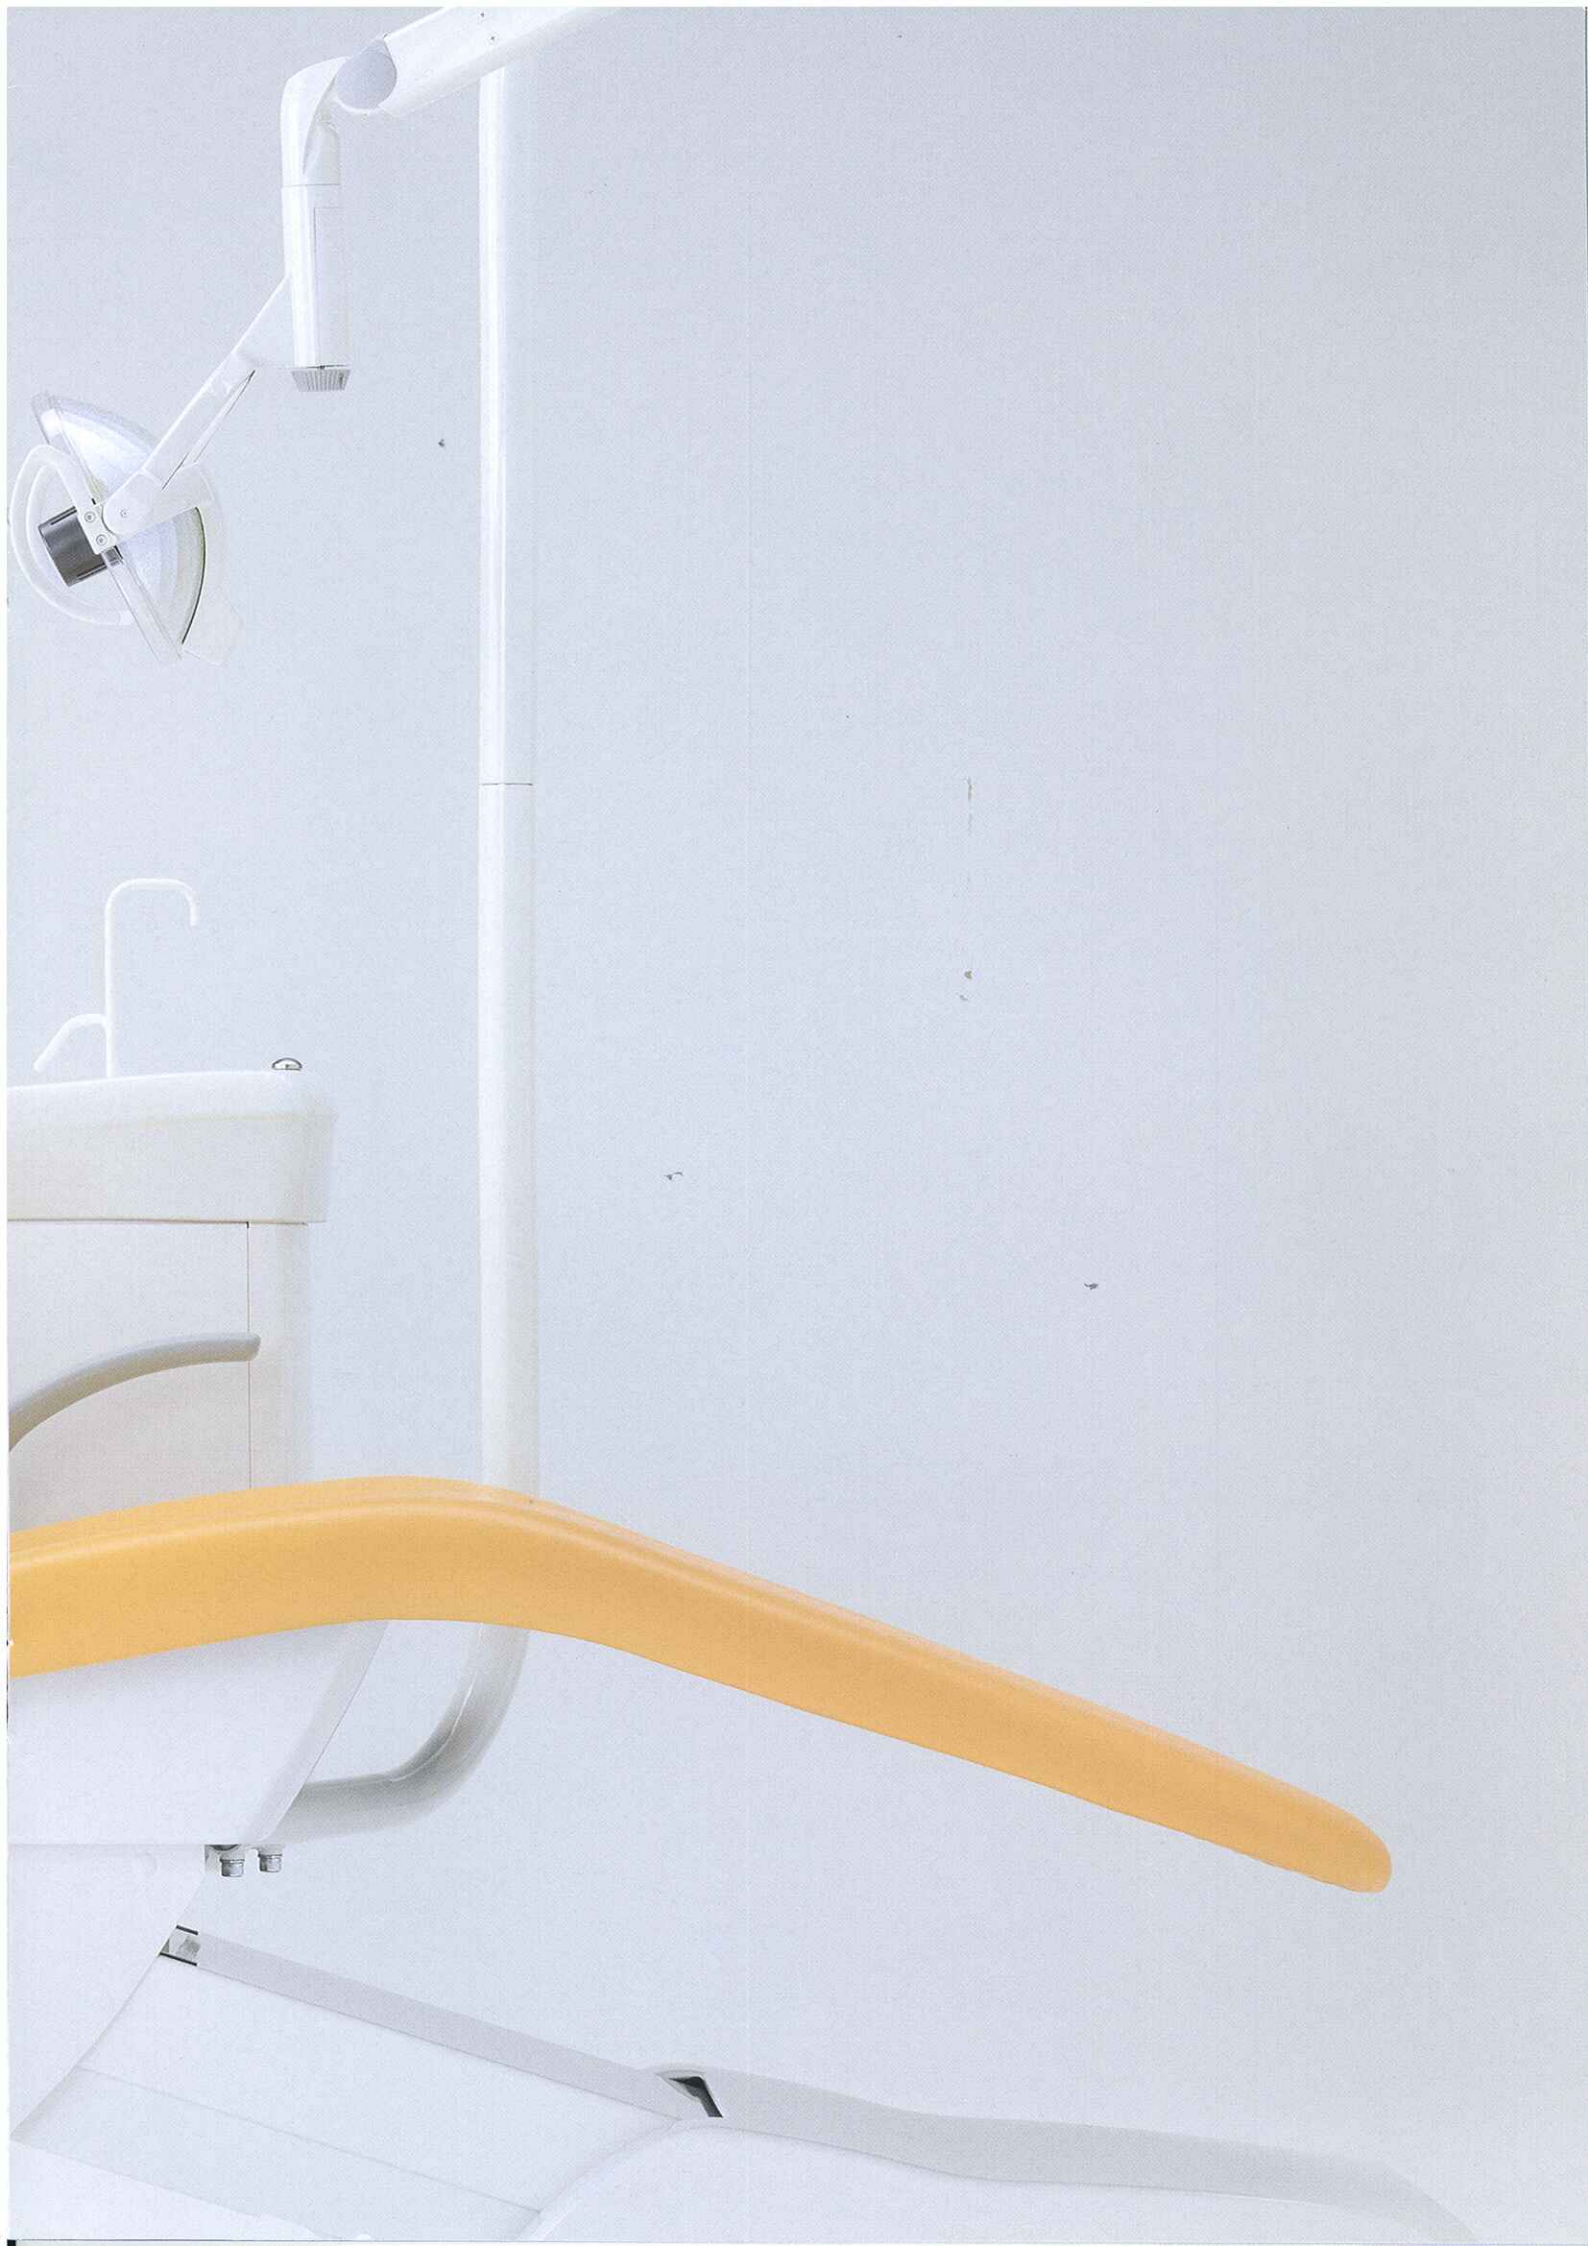

new standards of elegance and quality.

Innovation

Voyager II has been created with vision for the future incorporating a perfect balance between advanced ergonomics and aesthetic appeal.

Soft-touch seamless upholstery and new technology material have been incorporated in the manufacturing of Voyager II ensuring a long lasting durable and hygienic dental system.

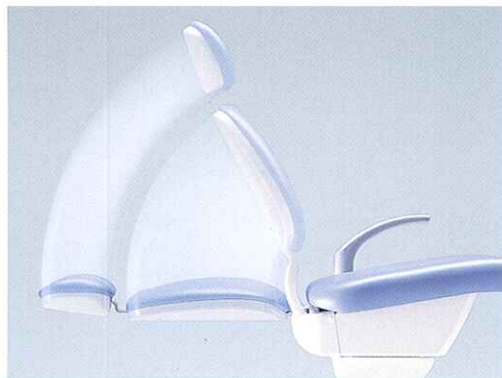

Comfort

Voyager II has been designed to allow the patient to sit or recline in perfect comfort allowing a relaxed treatment atmosphere.

An Axis mechanism supports the natural movement of the body through the similarity between the rotation fulcrums of the backrest and the patient's back. The patient experiences no discomfort through his or her back shifting against the backrest while changing position.

The 380mm stroke and the three positions can be controlled by a foot switch, enabling smooth and accurate position changes. The seat is covered with a new material soft against the skin. No seams make for easy cleaning.

To ensure complete safety, safety stop functions for the chair are located beneath the seat link, on the arm rotating shaft of the bracket table, and inside the bracket table.

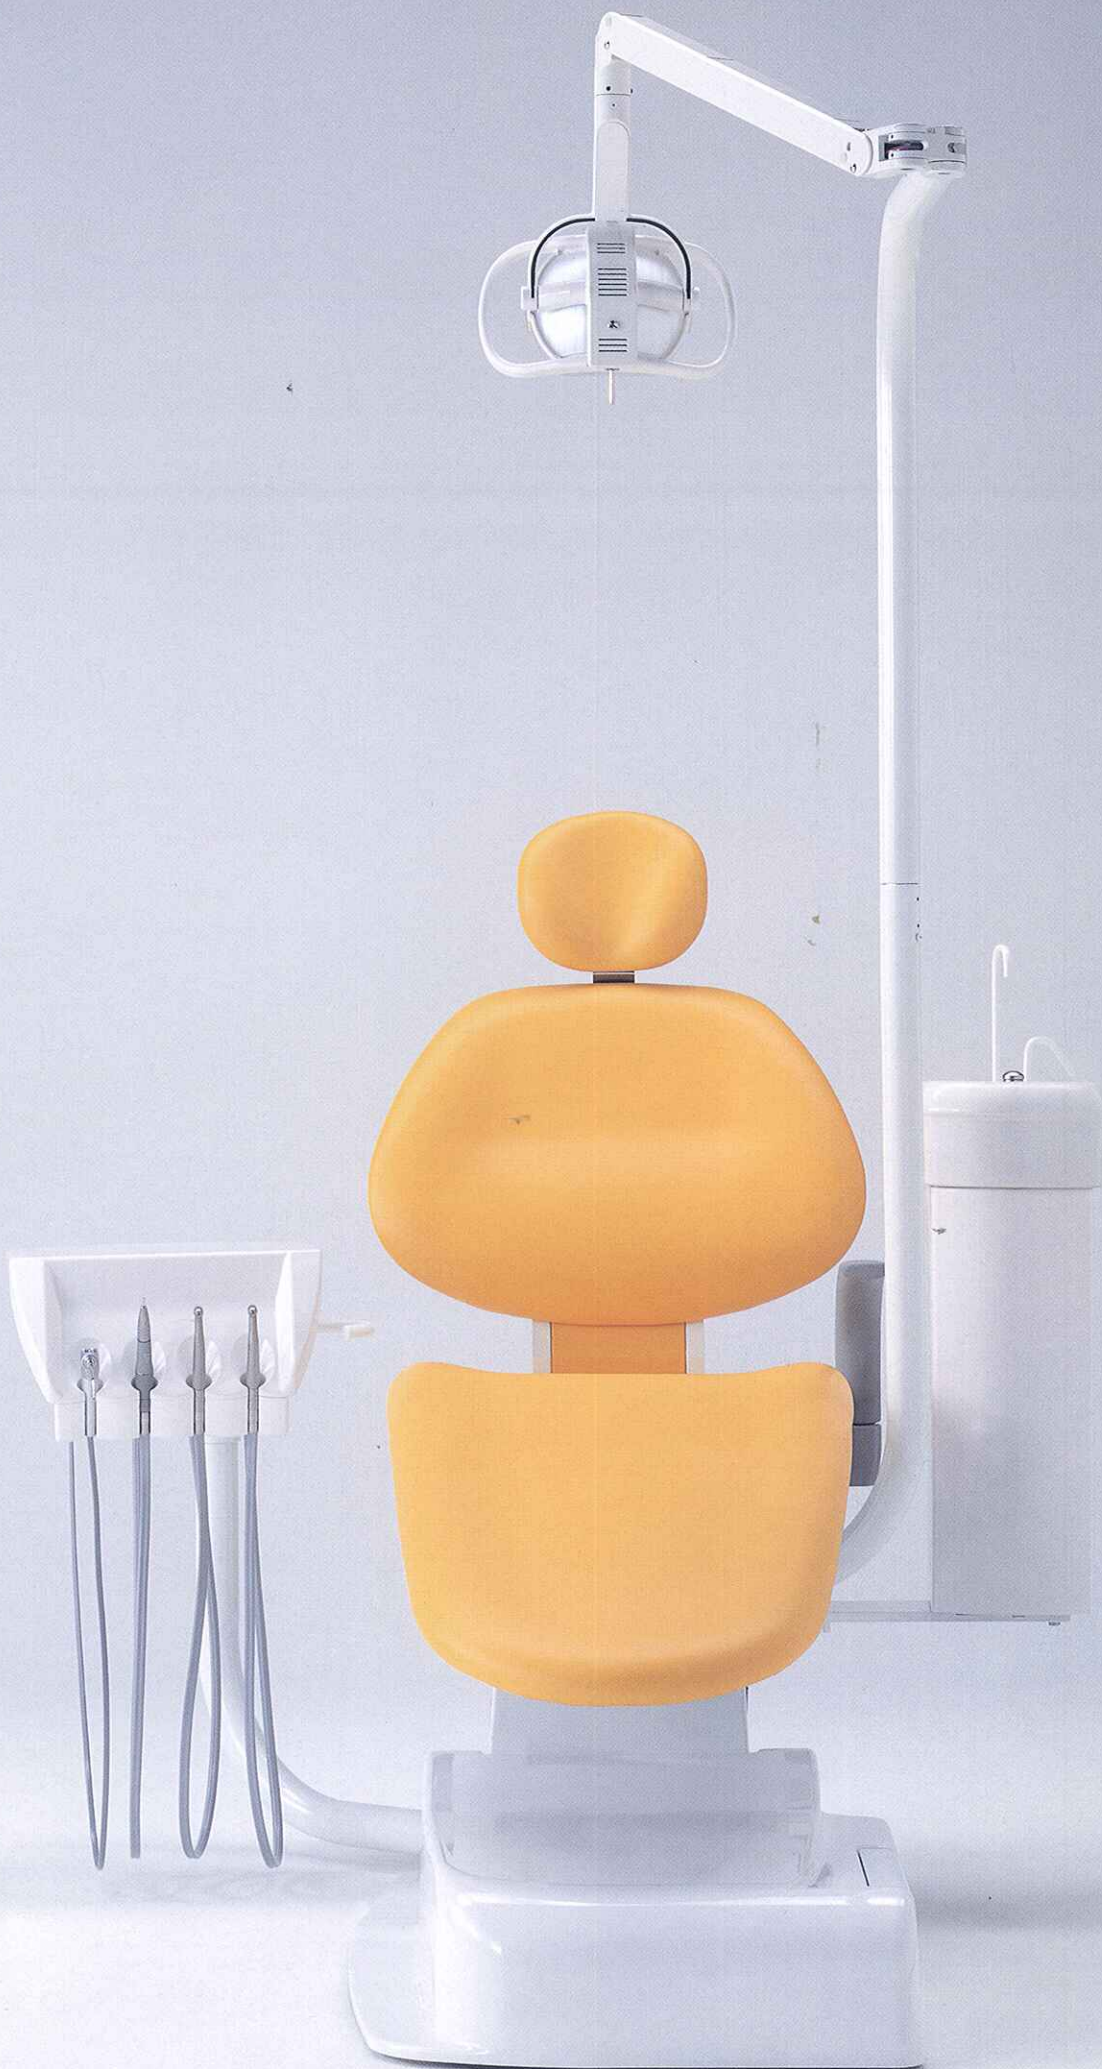

The seat holds a utility box and an umbilical hose for ease of cleaning and to enhance the appearance.
