

WHEN WAS THE LAST TIME YOUR COMPRESSOR & SUCTION UNITS WERE SERVICED?

Your compressor and suction unit are two of the most important pieces of equipment in your clinic. A problem with either unit can cause massive disruption to your patients, your staff, your surgery and you.

However, a simple annual service on your compressor and suction unit can often address the problems that cause a breakdown before they can cause you downtime. In most cases the service takes little over an hour to complete, and can be done on site by your regular service technician.

Contact your Cattani dealer or service technician today to schedule your annual service on your Cattani compressor and suction system.
